Education Department

**FIELD STUDY 6**

**Deployment Narrative Report**

Name: Gorospe, Mylene Joy L.

Year & Section: UP-FC1-BEED3-01

School Assigned: Juan P. Guadiz Elementary School

Date of Deployment: February 27- March 1, 2023

Cooperating Teacher: Mrs. Wennie S. Benitez

Grade & Sections observed: Grade 5- Masigasig

The Juan P. Guadiz Elementary School is surrounded by a lot of kind teachers. In our first day in this school, we met a teacher who assisted us to wait for the principal. The principal of this school is kind, he's the one who assigned us to our cooperating teacher. He also asked if something was bothering us or if we were okay throughout the day. In my first day in deployment, I was assigned to a Grade 5- Masigasig under Mrs. Wennie S. Benitez, my cooperating teacher. My day 1 in observation was interesting due to the fact that I was able to observe a lot of different attitudes, learnings and behaviors of the students and different teaching methods from my cooperating teacher.

My cooperating teacher was using 21<sup>st</sup> century-based to teach to her students. She is using a laptop that is connected to the television, it was really exciting because a lot of students are able to see and reflect on the monitor. Before she starts discussing their lesson, she always makes sure that his/her students are listening and focusing on her. She is engaging her students in video presentations that are connected to their lesson. I also observe that there are some students who are having a hard time understanding and analyzing basic questions. Some of these students are slow learners and some are fast learners. According to my cooperating teacher, these students are called "pandemic students" that is why a lot of them are having a hard time reading and writing. In my day 2 observation, we were assigned to monitor and help the students to write, read and spell because their teachers are not around. We help and guide the students throughout the day. The day 2 of our observation we encountered the "Earthquake Drill" in school. At first, we are confused about what's happening, but the students are alarmed, they know what to do and where to go. It was fascinating how the students knew and what to do in this kind of situation. In our last day in Juan P. Guadiz, I observe a lot of teaching methods that teachers use to help the students learn and be participative in their lesson.

There are some activities like experimentation in their science subject, the teachers let the students observe what will happen to their activity and they need to reflect afterwards. In their Filipino subject, they let the students read and explain what their understanding about the story. Collaborative activity will help the students learn from different perspectives of their classmates but there are some instances that the slow learners don't want to participate. In this kind of situation, the teacher lets the students reflect on their understanding about the lesson. If the students answered incorrectly, they would not say "You are wrong" but instead "Another answer?" or "Who would like to help?". Our 3-day observation was very helpful for us to see the different situation and attitudes of different students. This will be a guide for us as we pursue education and as a future educator.

About the assessment tool, my cooperating teacher are using 21<sup>st</sup> century based in teaching they are more in technology to help and engage the students in learning. In classroom management, my cooperating teacher handled it well. She knows how to give the students the chance to talk and collaborate with their fellow classmates. She also knows how to handle very naughty students inside the classroom. She is kind and has a strong aura therefore the students would listen to her throughout the discussion. The principal was amiable and very kind, we always make sure to have proper manners as we say goodbye in our 3-day observation. The other school personnel are friendly and respective as well. The Juan P. Guadiz Elementary School is not as big as other schools but the people there are kind and enthusiastic. The students are having a hard time reading and writing but still the teachers are doing their best to give a proper education to each learner.
