

For my observation experience when I was in Bonuan Boquig Elementary School. As we enter to BBES I've experience how kind, approachable and the warm welcome that we receive from the students, teachers, and principal. The principal's assistant is the one who introduce me to my cooperative teacher and that is Mrs. Cacas a general teacher of grade two pupils section two.

My first day observation is so smooth, where I have seen those different kind of students. Slow learners and fast learner is not difficult to determine, how being so comfortable the students with each other, where colors, status and culture are not a problem for the students to accept each other as one. Student's accepted me like a gift for them. I have receive the best smile from the students and consider me as their second teacher where they ask something about their lesson or their activity that they did not understand or they will ask me to read their activities for them to understand more the question when their teacher is not around and no one will do it for them.

Second day observation. Strategy of my cooperative teacher is the one that I have seen, flash card, song, games and the use of technology like tv to play a dance are the strategy she is using to introduce her lesson that become effective to make her students actively engage. "If the student become noisy and hyper this means they enjoying the lesson, and one of the reason for them to enjoy the lesson is to relate it to reality to trend that will make them relate of what you are saying, where they can share their own experience or their thoughts about the topic" that my cooperative teacher told me when I ask her about how she would know if the students are engaging to their lesson. I also observe in my second day observation how she discuss the lesson with a sweet smile on her face and like she is talking to her students like they are friend and how she guide her students and giving her full attention. Students and the teachers relationship were so good I, being so comfortable to each other, eating in break time together in the room and even at lunch time. Cleanliness environment is what I have seen on the school and classroom environment, how to educate their students to learn how to clean, to give respect to authorities and environment.

My last day observation. Some students are still don't know how to read and I understand why some are not being able learned to read it is because of the pandemic where modular become the new normal to them. There is a scenario that I witness where the one students seek help to her guardian to answer her activity that she felt difficulties off and her guardian didn't hesitate to not answer it, she told the answer of the student activity even though they are visible to the teacher. This is the one reason why the student are prevented from learning. This is the one mistake of some guardians doing, they providing what the child need to overcome.

My three days observation gives me so much learning on how to deal with students, strategies that will make them engage, a good relationship that will make them comfortable and will give their all trust in you, where you're one of their source of learning and the students is one of your source to learn and to grow more. Being the second mother of diverse children that will put all your love not by your profession but also to the students who give all their trust and their love of you. I learned that being a teacher is not all about teaching and building your students it is also guiding them to see what was the real world is, preparing them to stand by their own, letting them to make mistake to grow that will teach them to overcome their success. This is my three days observation that give me realization and knowledge about what was the word teacher really means.
